#Online Test Application System Project*

1.Create quiz folder and then create JS folder and then create CSS folder.

2.In quiz folder create a file name index.html.

3.In JS folder create two files Data.js and Index.js

4.In CSS folder I create a file name index.css.

5.In index.html file first I create qPanel1 and declare font size

And question input type radio and given the option 1.

6.again create radio id opt2 for question 2 and then create question options 3,4.

7. .again create radio id question 3 opt1 option 2 and then create question options 3,4.

8. . .again create radio id question 4 opt1 option 2 and then create question options 3,4.

9. . .again create radio id question 5 opt1 option 2 and then create question options 3,4.

10.Create Review style ,review-item for review section create background color, height, width, border radius, margin, padding ,align-item :center etc.

11.Create div class=review-items and use h1 tag to write Quiz and use p tag to write a paragraph.

12.Add div class review-item use h1 tag Student review and write a student no, name ,email.

13.create review button onclick previous review prev button and create next review for Next button.

14.Create a function for working buttons function previous review and function next review.

15.In index.css file create back ground color, background-size, background-position etc for background fonts.

16.In index.js file create array movement variable and next initialize the first question.

17.Generate from Json array data with index and create function generate(index) and function checkAnswer.

18.In Data.js file I crate my question and given four options for all my questions.

19.i create 5 question and their answers in this file name Data.js
